

# HARRYS MORENO

Backend Developer · Java / Spring Boot · Sportsbook & Real-Time Data

Medellín, Colombia · +57 316 1669952 · mobaharrys@gmail.com · [LinkedIn profile](#) · [github.com/\[MobaHarryz\]](#)

## SUMMARY

---

Backend developer with 3+ years building and modernizing enterprise systems in Java and Node.js/TypeScript: REST APIs, XML integration layers, Oracle and MySQL. For the last two years I worked inside live sportsbook operations at LeoVegas and Tipico, trading in-play markets and building the monitoring and automation the trading floor ran on. That means I know both sides of a betting platform: the services that move odds and settle markets, and what the people using them actually need. I am moving back to full-time engineering with that domain knowledge intact.

## CORE SKILLS

---

**Backend:** Java, Spring Boot, REST APIs, microservices, XML/JSON integrations, JUnit, SoapUI

**Data:** Oracle SQL, MySQL, query tuning, stored procedures, ETL pipelines, BigQuery

**Platform:** Git, Maven, Azure DevOps, CI/CD pipelines, staging environments, logging and monitoring

**Frontend:** JavaScript, TypeScript, Angular, React, Node.js

**AI tooling:** LLM-assisted data pattern recognition; AI code assistants in day-to-day development

**Domain:** In-play trading, odds and market data, risk monitoring, trading KPIs

**Languages:** Spanish (native), English (B2+, daily work in English-speaking teams)

## EXPERIENCE

---

**Backend Developer** — Freelance / Self-employed *Remote · Jun 2026 – Present*

- Building backend services in Java/Spring Boot with REST APIs, relational persistence and automated tests.
- Delivering end to end: version control, CI pipeline, staging validation and logging for production follow-up.

**Sports Trader Analyst** — LeoVegas Group *Medellín, Colombia · Jan 2025 – May 2026*

- Traded and monitored live sports markets, managing odds and risk in real time under strict latency and accuracy requirements.
- Built monitoring dashboards over live market data feeds so the trading floor could act on price and exposure movements faster.
- Automated ~90% of manual pattern-recognition work using SQL queries plus LLM models, returning roughly 15 hours a week to the team.
- Documented data flows and trading procedures so global teams could reproduce the same analysis.
- Worked daily with trading, operations and technical teams — translating what traders needed into terms engineering could act on.

**Sports Live Trader** — Tipico *Medellín, Colombia · May 2024 – Jan 2025*

- Monitored live events and managed in-play odds across football, basketball, tennis and hockey.
- Assessed betting patterns and market exposure to identify risk during live events.
- Tracked trading KPIs and reported on market performance to support operational decisions.

**Software Developer** — SETI S.A.S *Remote · Feb 2022 – Feb 2024*

Digital transformation of the insurance core platform for Suramericana (ARL Core Vida).

- Optimized Oracle SQL queries and stored procedures on policy reporting, cutting report generation from 4 hours to 30 minutes (~40%+ faster end to end).
- Refactored monolithic XML integration layers into maintainable microservices, making releases smaller and easier to roll back.
- Set up a staging environment with Azure DevOps pipelines to validate changes before production.
- Wrote JUnit unit and integration tests on the modules I owned, working in Scrum with code review.

**Full-Stack Developer** — Freelance *Remote (Chile / Colombia) · Sep 2020 – Jan 2022*

- Designed and shipped 10+ REST APIs and responsive web applications with React, Angular and Node.js for small businesses.
- Built admin dashboards with real-time filtering that replaced manual data entry workflows for clients.

## PROJECTS

---

- Odds ingestion & market service — Spring Boot service that consumes a live odds feed, normalizes markets, caches prices, exposes a REST API and emits events on price movement. Include: Docker Compose, MySQL or Postgres, JUnit + Testcontainers, GitHub Actions CI, structured logging, and a README with the architecture diagram and a screenshot.
- Second repo — anything you can defend line by line. Smaller is fine. A clean, tested, documented service beats a large unfinished one.

## EDUCATION

---

Software Engineering (in progress) — UNIMINUTO, Colombia · since 2025

Systems Technician Diploma — Instituto CESDE, Colombia · 2012–2014

## COURSES & CONTINUED LEARNING

---

SQL databases and query tuning · Java microservices architecture · Software testing · Full-stack Angular + Node.js · Scrum fundamentals (Udemy)

SAP BTP Integration Suite — currently studying (not yet certified)
